

Panel Topic: Voice & Data Networking Transformation in the Service Provider Environment

Attendees: Network/Communications/Computer/Electrical Engineers/Designers – software or hardware

Session Length: 1.5 hours

Objective: An overview on the direction of Packet voice & data networks from a service provider point of view and the vendors who support this market. The last 15 years have seen the emergence and rapid growth of many types of data networks (Frame Relay, ATM, IP, MPLS, VOIP). With the introduction of IP, the business proposition has changed drastically compared to when we had private line or circuit switched networks. This panel will go through the technical transformation necessary to stay profitable in this quickly changing market. Women representatives from Cisco, Lucent and Alcatel will be joining AT&T as the panelists. These women lead and influence the data and voice over packet direction of their perspective companies.

Coordinator: Margaret T. Chiosi, AT&T

Speakers:

- Service Provider Transformation - Margaret T. Chiosi, AT&T Director of IP and Data Network Development & Design
- Lucent - Julia Nord, Director of Tactical Account Management
- Cisco - Anna Pinczuk, Director of Engineering of Internet Technologies
- Alcatel - Vickie Yohe, Sr. Vice President, Fixed Solutions Division (FSD) and Voice Networks Division (VND) for Alcatel North America
